Second player needs to right click on the cell in which he wants to place his orb.

## 5. Instructions

Detailed instructions can be obtained by clicking on the instructions button .

Press on esc or backspace to return to the main menu.

Chain reaction is a 2 player game whose main objective is to take control of the board by eliminating the opponents orbs. The gamespace consists of a 6x8 grid in which orbs can be placed by clicking in the cell in which we want to place them.

### INSTRUCTIONS FOR SINGLE PLAYER

In the player's turn, the player must left click on the cell in which he/she wants to place the orb. The player can place an orb only if it contains orbs of the same colour as his or is empty. Each cell has a certain capacity, exceeding which the orbs split and go into the neighbouring cells. Cells at the corners have a capacity of 1, those at the edges have a capacity of 2 and the remaining have a capacity of 3. As the orbs split and go into the neighbouring cells, the colour of the orbs in the neighbouring cells changes to that of the incoming cells. Further, if the capacity

gets exceeded the orbs split again leading to a chain reaction. The game ends when all the orbs are of the same colour.

After the player plays his turn, he must right click anywhere on the grid for the system to make its move.

#### INSTRUCTIONS FOR 2 PLAYER GAME

The instructions for the 2 player game are similar to that for the 1 player game, the only difference being that the 2<sup>nd</sup> player needs to right click (instead of left) in order to place the orb at the desired position.

Enjoy your game!

Happy gaming!
